

UniBrain Student Provided Data Policy

This document defines how UniBrain handles student provided academic information. Its purpose is to clarify data ownership, FERPA considerations, system boundaries, and responsibilities related to student entered data.

1. Definition of Student Provided Data

Student provided data refers to any information voluntarily entered, uploaded, or submitted by a student directly into the UniBrain platform. This includes, but is not limited to, completed courses, in progress coursework, expected graduation timelines, and uploaded unofficial transcripts.

2. Data Ownership and Control

All student provided data remains under the control of the student. UniBrain does not independently verify, augment, or replace this information with official institutional records unless explicitly authorized through a separate institutional agreement.

3. FERPA Considerations

Student provided data is not disclosed by an educational institution and therefore does not constitute an institutional disclosure of education records under FERPA. UniBrain treats such data as user submitted information provided at the direction of the student.

If a student uploads an unofficial transcript or manually enters academic history, UniBrain processes this information solely for planning and guidance purposes. UniBrain does not represent this data as official, authoritative, or institutionally validated.

4. Permitted Use

Student provided data is used exclusively to generate personalized academic guidance, requirement evaluation, and explanatory responses within UniBrain. The data is not used for training language models, sold to third parties, or repurposed beyond the scope of the student's interaction with the platform.

5. Access Controls

Access to student provided data is limited to the authenticated student and authorized system processes required to generate responses. Advisors, administrators, or third parties may only access such data through explicit authorization and applicable institutional agreements.

6. Data Modification and Deletion

Students may edit or delete their provided data at any time through the UniBrain interface. Deletion requests remove the data from active use within the system, subject to standard system backups and retention policies.

7. Language Model Interaction

Raw student provided data is not transmitted directly to language models. Only institutionally computed or system derived outcomes are passed for explanation and presentation purposes. Language models are not permitted to generate, modify, or infer academic records.

8. Disclaimer of Academic Authority

UniBrain is a planning and guidance tool. Outputs generated using student provided data do not replace official advising, degree audits, or institutional determinations. Students are encouraged to verify all academic decisions with their institution.

This policy reflects UniBrain's commitment to data minimization, transparency, and FERPA aligned system design.
